

Unlock market insights value with Market Logic's DeepSights™ API

The DeepSights platform combines pioneering AI with a rich set of expert and end user tools to transform how your business collects, curates, and shares valuable market insights.

Built for enterprises with a significant investment in market data and consumer insights, DeepSights makes it simple to aggregate, analyze, and interrogate market insights and intelligence from in-house, paid, and public sources.

Leverage market knowledge at scale

To support integrations with custom applications and systems, DeepSights exposes APIs for programmatic access. By doing so, you have the freedom to give end-users access to critical market knowledge through any application in addition to the existing web-interface and standard integrations with Microsoft Office 365 and Google Workspace.

This further extends the impact of your insights investments and allows you to architect the smooth flow of market winning knowledge through your business systems and processes.

Why choose DeepSights API

1 Insights Expertise

DeepSights harnesses proprietary AI technology designed specifically for exploring insights knowledge, ensuring consistently high-quality responses that unlock the full value of your market knowledge.

2 Robust

Our high-performance infrastructure efficiently manages large volumes of data through advanced data processing capabilities.

3 Scalable

Our APIs offer scalable options to support application growth, allowing you to adjust to increasing demands seamlessly.

4 Simple to use

Setting up our APIs is straightforward with clear, comprehensive documentation.

5 Customizable

We provide the flexibility to tailor solutions to suit the specific requirements of your applications and business context.

Core API functionalities

Retrieve DeepSights outputs within any application

Find your market knowledge data and assets within any corporate search system

Automatically ingest data from any in-house system into DeepSights and/or auto-download data

Inject market insights directly into business systems

Typical use cases for leveraging the DeepSights API

Provide insights to end-users directly within exiting business apps

The DeepSights API is your gateway to transforming market knowledge and research data into actionable insights. Flexibly inject insights into any business application.

- ✓ **End-user app integrations:** provide immediate end-user access to insights from any business application.
- ✓ **Link to specialized AIs:** feed insights into special purpose AIs, for example, downstream AI concept generators.
- ✓ **Connect to general AIs:** complement other general AIs by running insights tasks securely, for example, with Microsoft Copilot.
- ✓ **Create custom connections:** architect safe and reliable knowledge retrieval with any key business apps.

Streamline knowledge data uploads and downloads

Speed up availability of content with auto data ingestion from in-house systems into DeepSights and auto data extraction.

- ✓ **Seamless content exchange** between internal systems and DeepSights.
- ✓ **Flexibility** to integrate unstructured document content from any source system.
- ✓ **Retrieval** of documents and AI-generated meta data.

Find the best knowledge assets via corporate search

Ensure corporate search systems reach across all connected data to find the very best knowledge assets

- ✓ **Search** primary, paid, public, and licensed content.
- ✓ **Surface DeepSights knowledge assets** for easy access via federated search in any search system, e.g., your corporate intranet.
- ✓ **Ensure comprehensive access** to valuable insights across the organization.

DeepSights API

Technical Details

DeepSights APIs operate as REST APIs with API key authentication. They offer support for user impersonation, allowing for the retrieval of AI answers and report generation while reflecting the respective user's access permissions on the platform.
